Summary

Lead Data Scientist with 10 years of experience in data science and software development for the financial services industry, with an emphasis on life insurance and underwriting. I currently serve as technical lead for Securian's first AI pod, delivering production AI solutions that materially reduce cost and cycle time for underwriting. My work focuses on developing and operationalizing AI in a regulated environment, establishing standards for data science engineering, testing, deployment, and monitoring, and partnering with business and technology leaders to shape enterprise AI strategy and reusable platform capabilities.

Key Technical Skills

- Strong proficiency with **AWS** for AI and ML solutions, including design of AI workflows using services such as **SageMaker, Bedrock, Textract, Comprehend, Step Functions, Lambda**, and **S3**. Earned both "AWS Certified Cloud Practitioner" and "AWS Certified Machine Learning – Specialty" certifications.
- **Programming:** Proficient with Python, R, and SQL, as well as Git and code review practices to build maintainable, testable data science codebases in collaborative environments.
- **ML and analytics:** End-to-end experience with data wrangling, exploratory analysis, feature engineering, supervised learning, generalized additive models, and modern NLP, LLM, and generative AI techniques, including experiment and evaluation design for AI solutions in production.
- **Cloud and MLOps solutions:** Design and support of end-to-end ML solutions on AWS, partnering with ML engineering and platform teams on deployment patterns, CI and CD pipelines, performance monitoring, and incident response for operational AI systems.
- **Responsible AI, governance, and practices:** Application of software engineering standards, automated testing, and model governance practices including explainability, fairness and robustness considerations, model validation, lifecycle management, and alignment with responsible AI frameworks and emerging regulatory expectations.

Professional Experience

Lead Data Scientist

Securian Financial | 2025 - present

- Data science lead for Individual Solutions Underwriting (IS UW) AI pod
- Collaborated with cross-functional team of architects, developers, engineers, and business SMEs to refine APS Summarization solution for informal underwriting and bring it to production, reducing summary turnaround time from 3-4 business days to under an hour for most cases and eliminating approximately \$400K in projected annual external vendor spend
- Positioned APS Summarization as a reusable underwriting platform capability by aligning data, architecture, and integration with downstream components (e.g., agentic decision support) and the broader UW transformation
- Defined data science engineering standards for production-bound work (code quality, testing, deployment patterns) and applied them to an actively used production system

Data Scientist/Senior Data Scientist

Securian Financial | 2022 - 2025

- Data science lead for underwriting analytics across individual and group business, including analysis of evidence-of-insurability and accelerated underwriting data, and modernization efforts
- Originated and led the AI APS Summarization initiative from early concept and vendor-replacement business case through successful pilot and transition into the AI pod for full production build
- Built AI-powered document processing capabilities for claims using AWS (SageMaker, Textract, Comprehend) to automate information extraction and reduce manual review effort and cycle time
- Consulted with other technical teams on architecture and best practices in the development of AI Document Processing (AIDP) solutions
- Contributed to enterprise AI governance processes and strategy groups, including discussion of model fairness, DE&I impacts, and sustainability considerations
- Developed new mortality projections with generalized additive models; results informed pricing and reserving assumptions across large in-force blocks

Data Analyst

U.S. Bank | 2020 - 2022

- Built and maintained Tableau dashboards with several thousand weekly views to communicate consumer banking KPIs to leadership and field partners
- Designed data pipelines and Python automation to support recurring reporting and reduce manual effort

Business Intelligence Analyst

Securian Financial | 2017 - 2019

- Automated reporting with VBA, Excel, and Access
- Designed reports in SAP Business Objects for internal and external Wealth Management Group stakeholders
- Leveraged R for ad-hoc statistical analyses of sales data

Application Developer

Securian Financial | 2015 - 2017

- Developed SharePoint sites and workflows to automate business processes
- Supported Guardium data security platform
- Owned maintenance and support of an application which was essential to state regulatory compliance

Education & Certifications

- **M.S., Statistics** - Texas A&M University (2021)
- **B.A., Economics & Computer Information Systems** - Augustana University (2015)
- **AWS Certified Cloud Practitioner** (2022)
- **AWS Certified Machine Learning – Specialty** (2023)
